\*Data provided on the following pages is based on geographically related information of Mount Diablo Unified School District based on a third-party source using Esri analytics in combination with Census information and American Community Survey. This information is provided by Davis Demographics as supplemental information about the district. Davis did not research nor guarantees accuracy of the Census data.

### INTRODUCTION AND DISTRICT BACKGROUND

Mt. Diablo Unified School District (MDUSD) has contracted with Davis Demographics to develop and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes updating District mapping files, analyzing District's past four years of geocoded student data files (each representative of late October's head count), developing, and researching pertinent demographic data in and around the District, identifying current and future residential development plans and preparing a ten-year student population projection.

The purpose of this report is to identify and inform the District of the demographic trends occurring within the community, how these trends may affect future student populations, and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts, to assist the District in evaluating future site requirements and the need for potential attendance area boundary changes.

Davis Demographics, a non-biased third-party consultant, has been contracted to prepare and maintain a ten-year demographic study. In this study, Davis Demographics produced detailed neighborhood and attendance area population projections based on the residential address of students. Davis Demographics bases its projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside. This study is intended to help the District notice specific demographic trends that could assist them in making informed decisions regarding long-range planning efforts.

The **Sources of Data** section details how the two sources of data, geographic and non-geographic, are collected and used in the ten-year student population projection model.

The **Ten-Year Projection Methodology** section discusses, in detail, how the factors used in the study were calculated, and why they were used. These factors include area birthrates and their effect on incoming kindergarten classes, the effects of student mobility, student yield factors based on historic housing data and trends, and a detailed review of future residential development within the District.

The **Student Resident Projection Summary** sections offer a review of this year's student resident projection results. Included in these sections are the district wide student population projection summary and a projected resident student population summary for each of the existing attendance areas and of the individual study areas from which they were calculated.

While reading this report, it is important to remember that it is based on data gathered during fall of 2021. Because population demographics, development plans, funding opportunities, and District priorities are all subject to change. This is the first year of a three-year study. Data will be maintained by Davis staff and updated reports provided each winter.

### EXECUTIVE SUMMARY

Davis Demographics is assisting the Mt. Diablo Unified School District to plan for future student population changes. By factoring current and historical student data with the latest demographic data and planned residential development information, Davis Demographics calculated a ten-year student population projection. This projection is based on the residence of students, not school enrollment, and is designed to alert the District as to when and where student population shifts will occur. Research and data are based on geographic reference, figures reflect the calculation of study areas that make up areas within the MDUSD. This allows Davis Demographics to present existing attendance area and newly adopted area information without disconnect from historical data.

#### Key Items in the District-wide Analysis Section of the Report:

- Mt. Diablo Unified School District is expected to decline annually for the next ten years if current trends continue.
- There are **14** projects actively under construction or currently planned within Mt. Diablo Unified School District boundaries.
  - Ultimately there could be as many as 1,145 units built in the next 7 years.
  - Of the 1,115 units, there will be an estimated 523 single family detached, 70 multifamily attached, and 552 apartments.
- Mt. Diablo Unified School District can expect a small increase in K classes, regardless of the decrease in birthrates, due to inward mobility.
- The overall high school student enrollment has been decreasing annually the last several years from 8,074 students in fall 2017 to 7,956 students this fall.
- Once made up of 7,380 students, the middle school population could reach 5,600 students by 2031.
- There are nineteen ES attendance areas that are projected to experience decline within five and ten years. The largest decrease can be found in the Shore Acres zone with projected decline over 140 students in the next five years followed closely by Sun Terrace with 130 student decline.

# Demographic Study SY 21-22

The following chart summarizes the projected student populations from SY2022 to SY2031.

**Table 1: District Summary**

Grade	Historic Resident Counts				Current	Forecasted Resident Counts									
	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031

More detailed information and analysis is provided in Section Five

## SECTION ONE – METHODOLOGY

### Sources of Data

#### **Geographic Map Data**

Five (5) geographic data layers were modified or created for use in the ten-year student population projections:

1. Street Centerline Database / Parcels
2. Study Areas
3. Schools
4. Students – Historical and Current
5. Planned Residential Development

#### **1) Street Centerline Data / Parcels**

The main function of the street centerline /parcel data file is in the geocoding process of the student data. The geocoding process places a point on the map for every student in the exact location that student resides. Each student is geocoded to the parcels by their given residence address. This enables Davis Demographics to analyze student data in a geographic manner. Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets, and neighborhood streets are generally used as boundaries for the study areas.

#### **2) Study Areas**

Study areas are small geographic areas, like neighborhoods or portions of neighborhoods, and are the building blocks of school district attendance areas. Study areas are geographically defined following logical boundaries of the neighborhood such as freeways, streets, railroad tracks, or green space. Each study area is then coded with the corresponding elementary, middle, and high school that the students in the area are assigned to attend. By gathering information about the district at the study area level, Davis Demographics and the MDUSD can closely monitor growth and demographic trends regions and identify potential need for boundary or facility adjustments. Currently, 656 study areas make up the Mt. Diablo boundary.

#### **3) Schools**

School facility information including school name, address, unique identifying code, grade ranges, and permanent capacity were provided to Davis Demographics by district staff.

#### **4) Student Data**

**a. Historic Student Data** - Historic population data is used to compare past student population trends as well as the effects of mobility (student movement in or out of existing housing) throughout the District.

**b. Current Student Data** - A student data file representing student membership as of fall was provided to Davis Demographics by district staff. This data was summarized by grade level and each student was located by residential address to identify current study area populations. This data is used as a base for student population projections. The projections run each of the next ten years from SY2021-22 through SY2031-32.

**c. Student Accounting** - The Student Verification (Table 2) indicates the total student enrollment as of October 1, 2021 and the number of students used in the ten-year student population projections. The projection model is based upon student residence and typically excludes students residing outside of the District's boundaries.

Table 2: Verified Student Data Forms

Student Data Verification Form
Current SY 2021 - 2022

District: Mt. Diablo USD
To: Lisa Gonzales

Table with 2 columns: Field Name, Value. Includes Date Received (11/16/2021), Date Processed (11/29/2021), Initials (LS), Date of Data (10/17/2021), Student Records (28,838), Valid Address Fields (28,837), PD Boxes (1), Invalid/Empty Address Fields (0).

Table with 2 columns: Field Name, Description. Lists various data fields included in the file such as LocalID, LangPia, rld, NSLP, rpy, ParentIDLvl, rfc, Foster, rrc, Homeless, rrx, Migrant, Grade, Tribal\_Foster, SchoolCode, SchoolName, EthnicityRace, EnglishLearner, TitleIBilingualMigrant, GATE, Title\_I\_P\_C\_Migrant, Students\_Disabilities, Socio\_Economically\_Disadvant, Adult\_Students\_Disabilities, SpEd, ResSch, IntDis, TransDis, IntDetExp.

Attribute Details

Table with 2 columns: Grade, # of Students. Lists student counts for grades 01 through 12, and Total (28,838).

Table with 2 columns: Ethnicity, # of Students. Lists counts for various ethnicities including Am Indian/Alaskan Nat, Asian, Black/African Am, Filipino, Hispanic, Missing, Multiple, Not Hwlin/Ochr Pac Islndr, White, and Total (28,838).

Table with 2 columns: EnglishLearner, # of Students. Lists counts for N (22,736), Y (6,102), and Total (28,838).

Table with 2 columns: Socio\_Economically\_Disadvant, # of Students. Lists counts for N (15,365), Y (13,473), and Total (28,838).

Table with 2 columns: SpEd, # of Students. Lists counts for Full Time SE <= 51% IRC (1,238), Not in Special Ed (25,143), Part Time SE > 50% IRC (2,457), and Total (28,838).

IMPORTANT! PLEASE READ CAREFULLY, COMPLETE AND SIGN

The District acknowledges by signature below that the above numbers accurately reflect the enrollment of the District as of the annual fall reporting date. In addition, the District represents that the fields included with the file, as listed above, are the only fields necessary to identify any students the District deems important for all anticipated types of boundary planning and analysis. Davis Demographics will be happy to assist work on this file. If errors are later found to exist in the file or if important fields are not included, additional fees may be required by Davis Demographics to correct any inaccuracies and the project timeline may need to be extended.

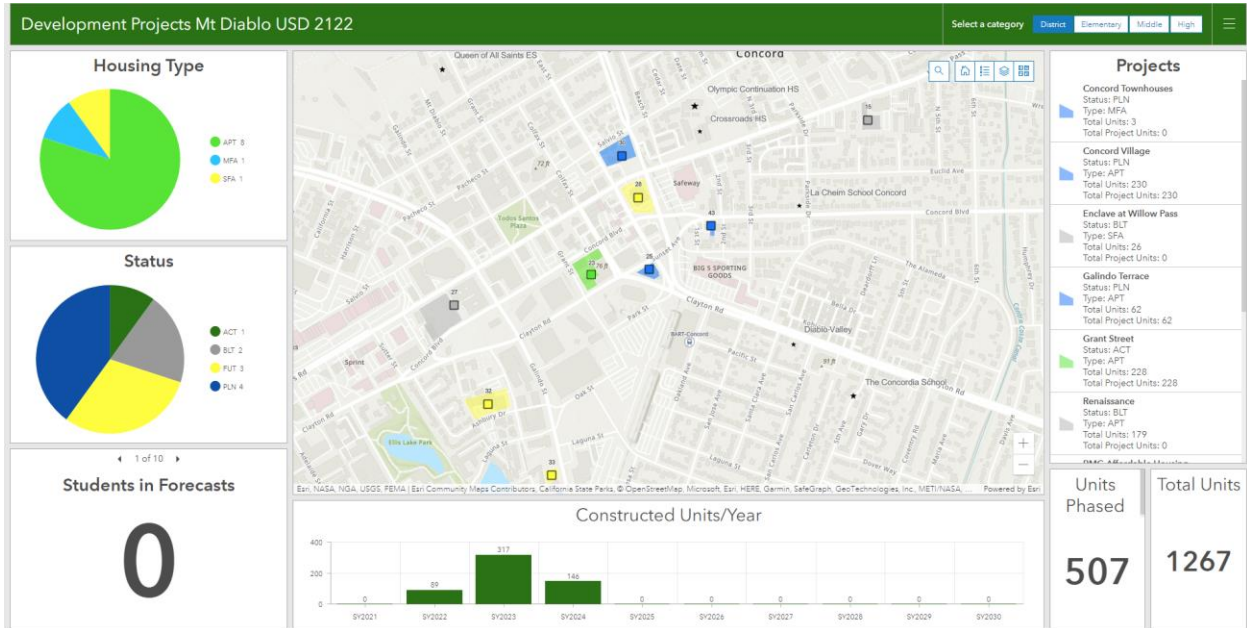

Map 1: Resident Student Density SY2021/22

### 5) Planned Residential Development

Data was obtained through discussions with the local municipalities. Davis Demographics researched possible new development that could affect the future student counts and reviewed information with MDUSD staff. This data includes development name, location, housing type, total number of units of development,

remaining number of units in development, and project phasing (projected move in dates). The planned residential development information is subject to changes in the marketplace, this data should be reevaluated annually. Davis Demographics and MDUSD are monitoring projects closely during this study. A dashboard was created to share information: <https://bit.ly/34H5E5p>

### Data Used for Variables

Three sets of data were compiled and reviewed for use in the ten-year student population projections by residence:

1. Births by zip code
2. Mobility Factors
3. Student Yield Factors

#### 1) Births by Zip

Birth data by zip (correlated to the boundaries) was obtained through State of California. Past changes in historical birth rates are used to estimate future incoming kindergarten student population from existing housing. Birth rates could not be analyzed at regional levels within the district due to the limited reported information.

#### 2) Mobility Factors

Mobility refers to the increase or decrease in the movement of students within and out of the District boundary. Mobility, which is essentially a modified cohort, is applied as a percentage of increase/decrease among each grade for every year of the projections.

#### 3) Student Yield Factors (SYFs)

Student Yield Factors (sometimes referred to as “Student Generation Rates”) are used to determine possible impact to enrollment from forecasted residential construction. Davis conducted an extensive review of existing housing types for used in student generation.

### Ten Year Projection Methodology

The projection methodology used in this study combines historic student population counts, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide projections are summarized from the individual study area projections. **These projections are based on where the students reside and where they are assigned to attend school. To provide the most accurate estimate of where future school facilities may be needed, Davis Demographics uses the location of where the students reside as opposed to their school of enrollment.** The best way to plan for future student population shifts is to know where the next group of students will be living. The following details the methodology used in preparing the student population projections by residence.

#### **Ten-Year Projections**

Projections are calculated out ten years from the date of projection for several reasons. The planning horizon for any type of facility is typically no less than five years, often longer. Ten years is usually enough to adequately plan for any new facility. Projections beyond ten years are based on speculation due to the lack of reliable information on birth rates, new home construction, and economic conditions.

#### **Why Projections are Calculated by Residence**

Typically, district generated projections are based on school enrollments and are projected for staffing and budgetary needs. However, this method is often inadequate for long-range planning needs, such as the location of future school facilities, because the location of the students is not taken into consideration. A school's enrollment can fluctuate annually not only due to population trends but also due to variables in the curriculum, program changes, school administration, and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by Davis Demographics is unique because it modifies a standard cohort projection with demographic factors and student residential location. **Davis Demographics bases its projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.**

The best way to plan for facility requirements is to know where the next group of students will be residing. The following details the methodology used in preparing the student population projections.

**Projection Variables**

Each year of the projections, 12<sup>th</sup> grade students graduate, and continuing students’ progress through to the next grade level. This normal progression of students is modified by the factors below.

**Incoming Kindergarten**

Davis Demographics uses the birth data correlating to the district boundary and applies the data accordingly. The assumption underlying the use of birth statistics from year to year is that increases or decreases in the number of births in the area will translate to increases or decreases in future kindergarten enrollment. For example, the SY2022 kindergarten class in MDUSD was born five years previous in 2016. Any subsequent changes in births in 2016 compared to 2017 and 2016 to 2018, etc. would either increase or decrease future kindergarten class sizes.

Incoming kindergarten classes for existing homes are estimated by comparing changes in past births in the area. Davis Demographics assumes the current kindergarten class was born five years prior in 2016. Future incoming kindergarten classes are estimated by comparing the number of births in 2016 to the number of births in 2017 through 2018. Davis Demographics compared the total births in 2016 to the total births in 2017 to determine a factor for next year's kindergarten class (SY2022-23). The 2016 births were compared to 2020 (SY2025-26 K class), 2015 to 2018 (SY2023-22 K class), and on.

Davis Demographics collected birth data for the District and listed the live birth counts from 2005 through 2018. The 2005 to 2014 data is not used in the actual birth rate calculations but more for historic reference.

- To calculate the birth rates that would be used to determine the incoming kindergarten class for SY2021-22, Davis Demographics compared the BY2016 live birth counts (representing the future SY2021-22 K class) and compared it to the BY2015 counts.
- Since the future students representing SY2024-25 through SY2030-31 (BY2020 to BY2026 births) are not yet born, Davis Demographics had to take certain steps to determine the birth factors used for SY2024 through SY2030. Davis Demographics used a linear trend model of the previous four years of birth rates to create the last six years birth rates. This was done to avoid over or under projecting the number of new kindergarteners in the final years of the projection and is a very common practice.

**Student Mobility Factors**

Student mobility factors further refine the ten-year student population projections. Mobility refers to the increase or decrease in the movement of students within and out of the District boundary (move-in/move-out of students from existing housing). Mobility Factors consider apartment movement within the District, housing resales, foreclosures, movement out of the district, and high school dropout rates. Mobility, like a cohort, is applied as a percentage of increase/decrease to each grade for every year of the projections.

A net increase or decrease of zero students over time is represented by a factor of **1.000** or a 100% pass through rate. A net student loss is represented by a factor less than **1.000** (such as .97 or a -3% net loss) and a net gain by a factor greater than **1.000** (such as 1.02 or a 2% net increase).

### How is Mobility calculated?

100 Kindergarten students in SY2020-21
Example: $\frac{X}{100} = 1.06$ (1st grade mobility)
= 106 1st grade students in SY2021-22

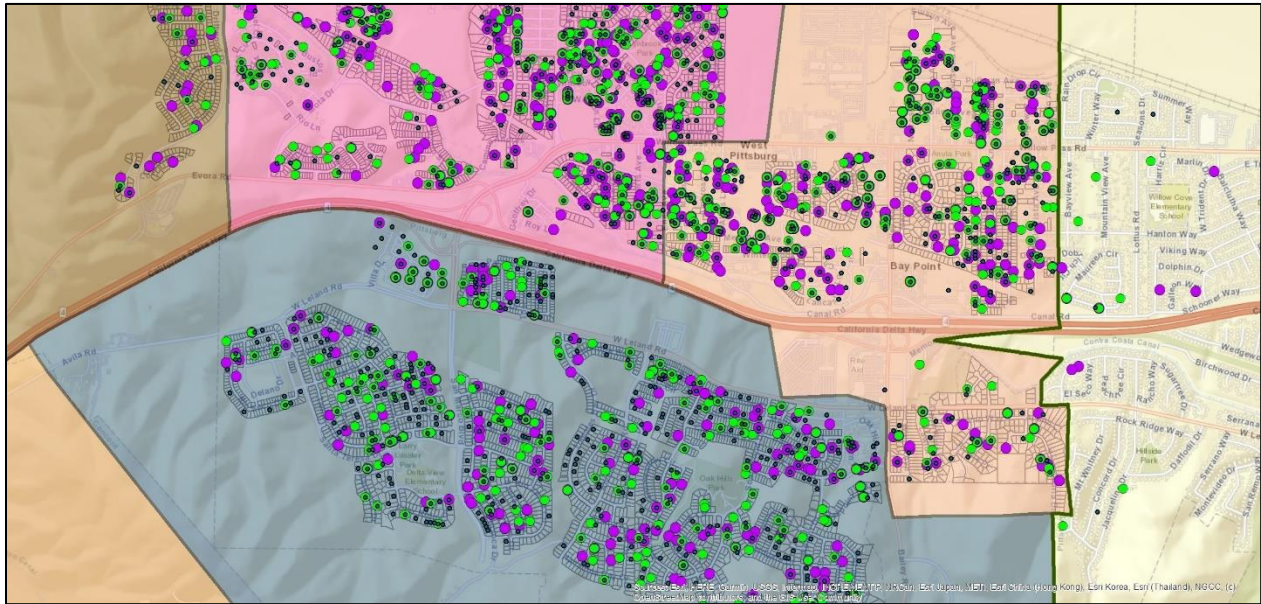

**Table 4: Mobility**

**Student Yield Factors (SYF)**

The Student Yield Factors are used to forecast growth from new residential development. Student Yield Factors (Student Generation Rates) were calculated by Davis Demographics. Student counts were based on the Fall 2020 student data. The student data is compared spatially to existing housing types (single-family detached, multi-family, single-family attached, apartments, etc.) by overlaying the students points by grade configurations to the parcel polygons (example in image). Davis has worked with Contra Costa County districts for many years allowing our firm to utilize parcels information from the county.

**Table 5: Student Yield Factors**

Homes Built between 2014-2020					Homes Built - Entire Existing Sample

**Planned Residential Development**

Closely related to the Student Yield Factors are planned residential development units. Planned residential development data is collected to determine the number of new residential units that will be built over the time frame of the student population projections. Davis Demographics was provided information from city planning departments as well as contacting developers regarding planned or active construction. Currently, there are approximately 1,305 active or planned units expected in the district over the next ten years.

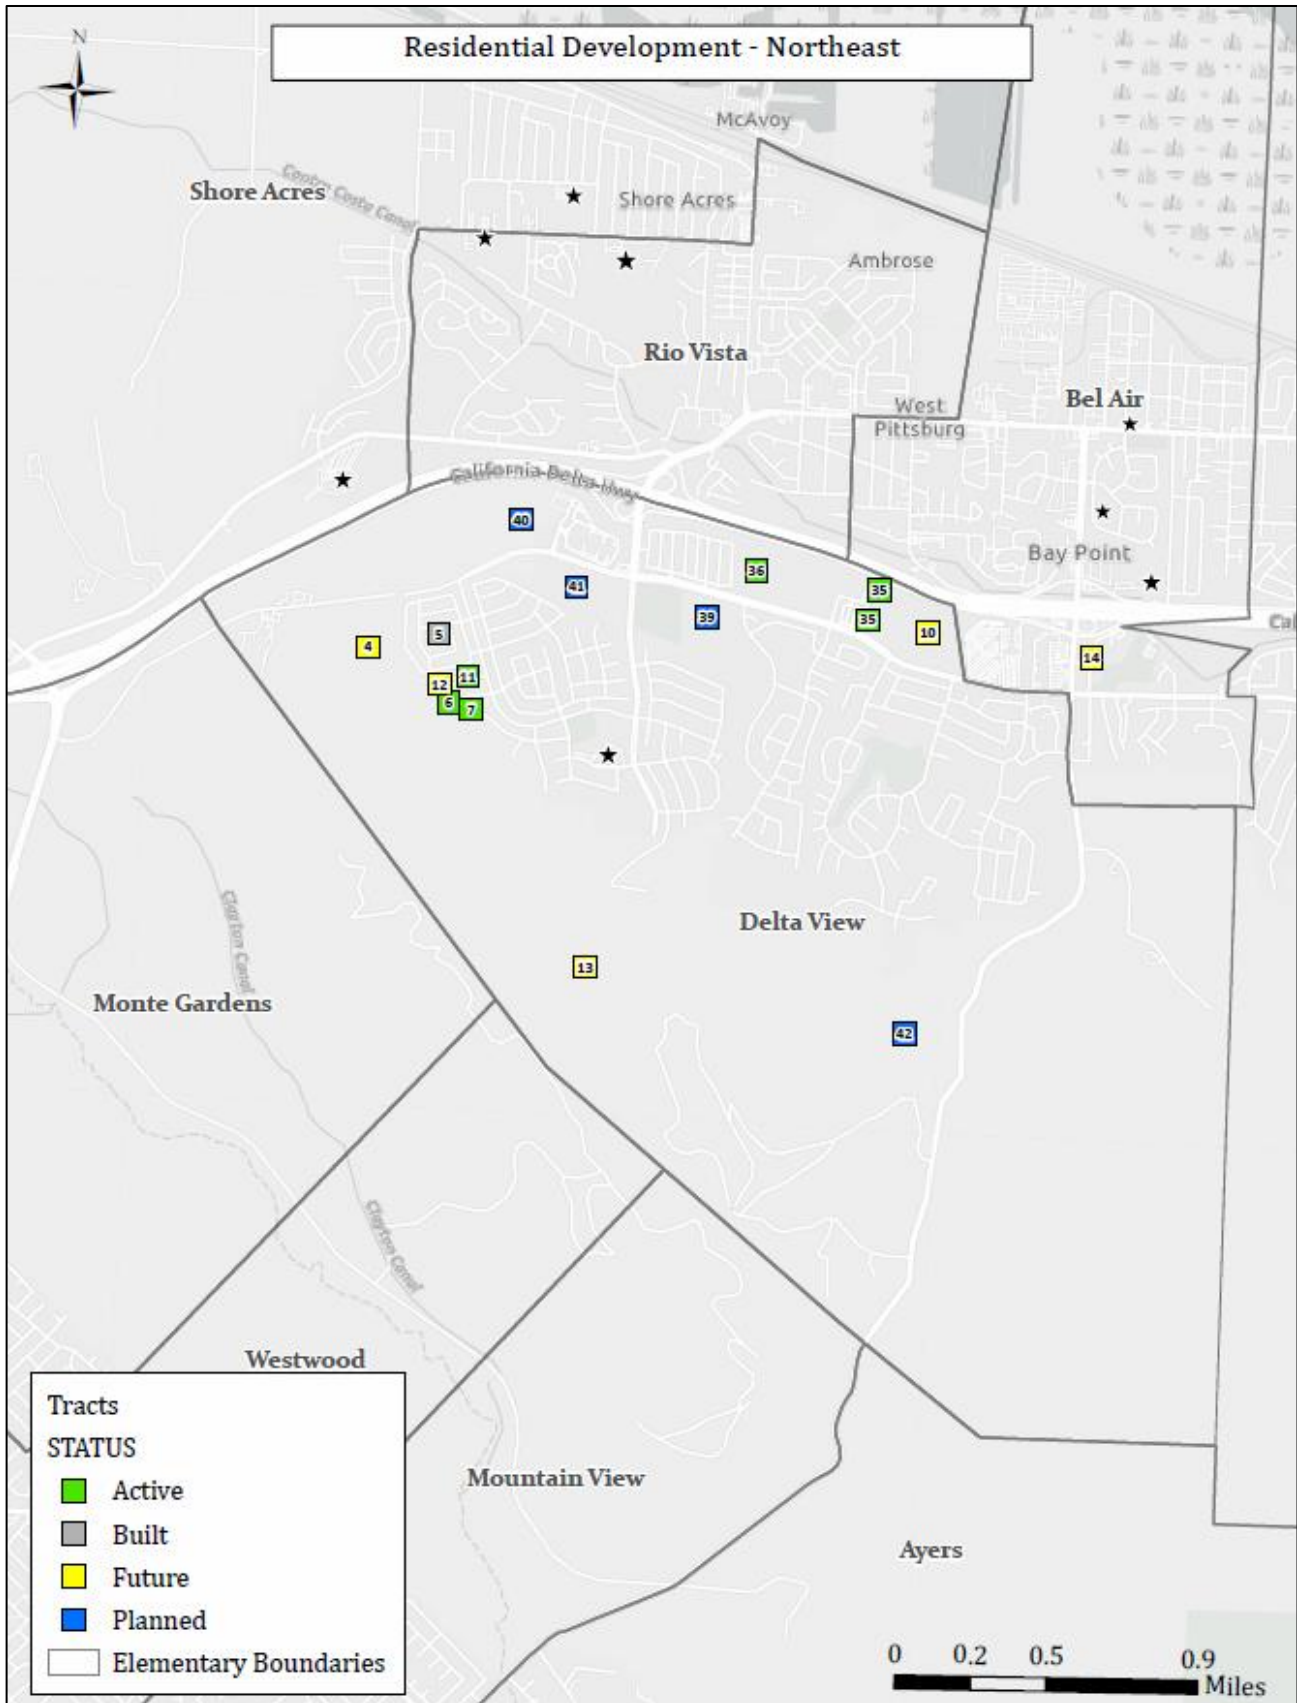

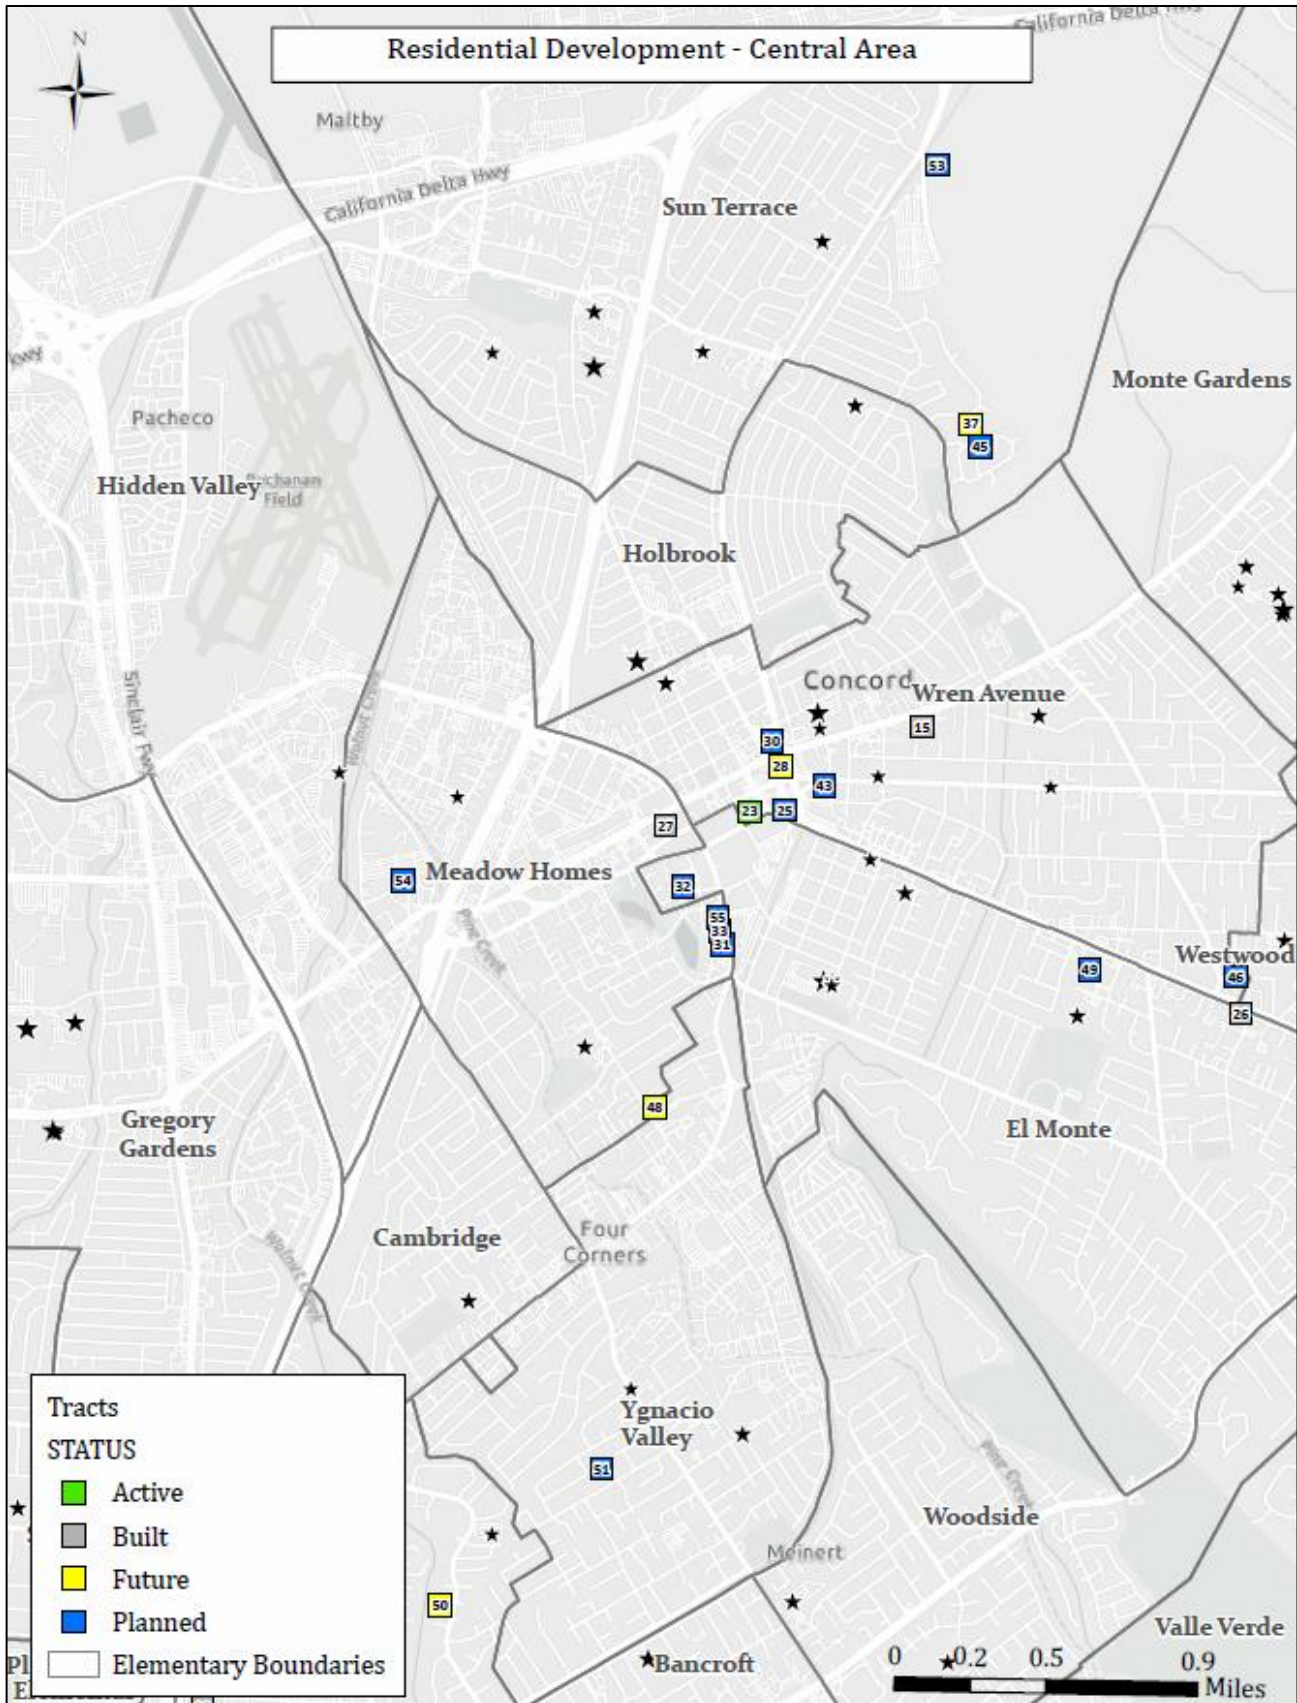

Map 2: Resident Development SY 2021/22

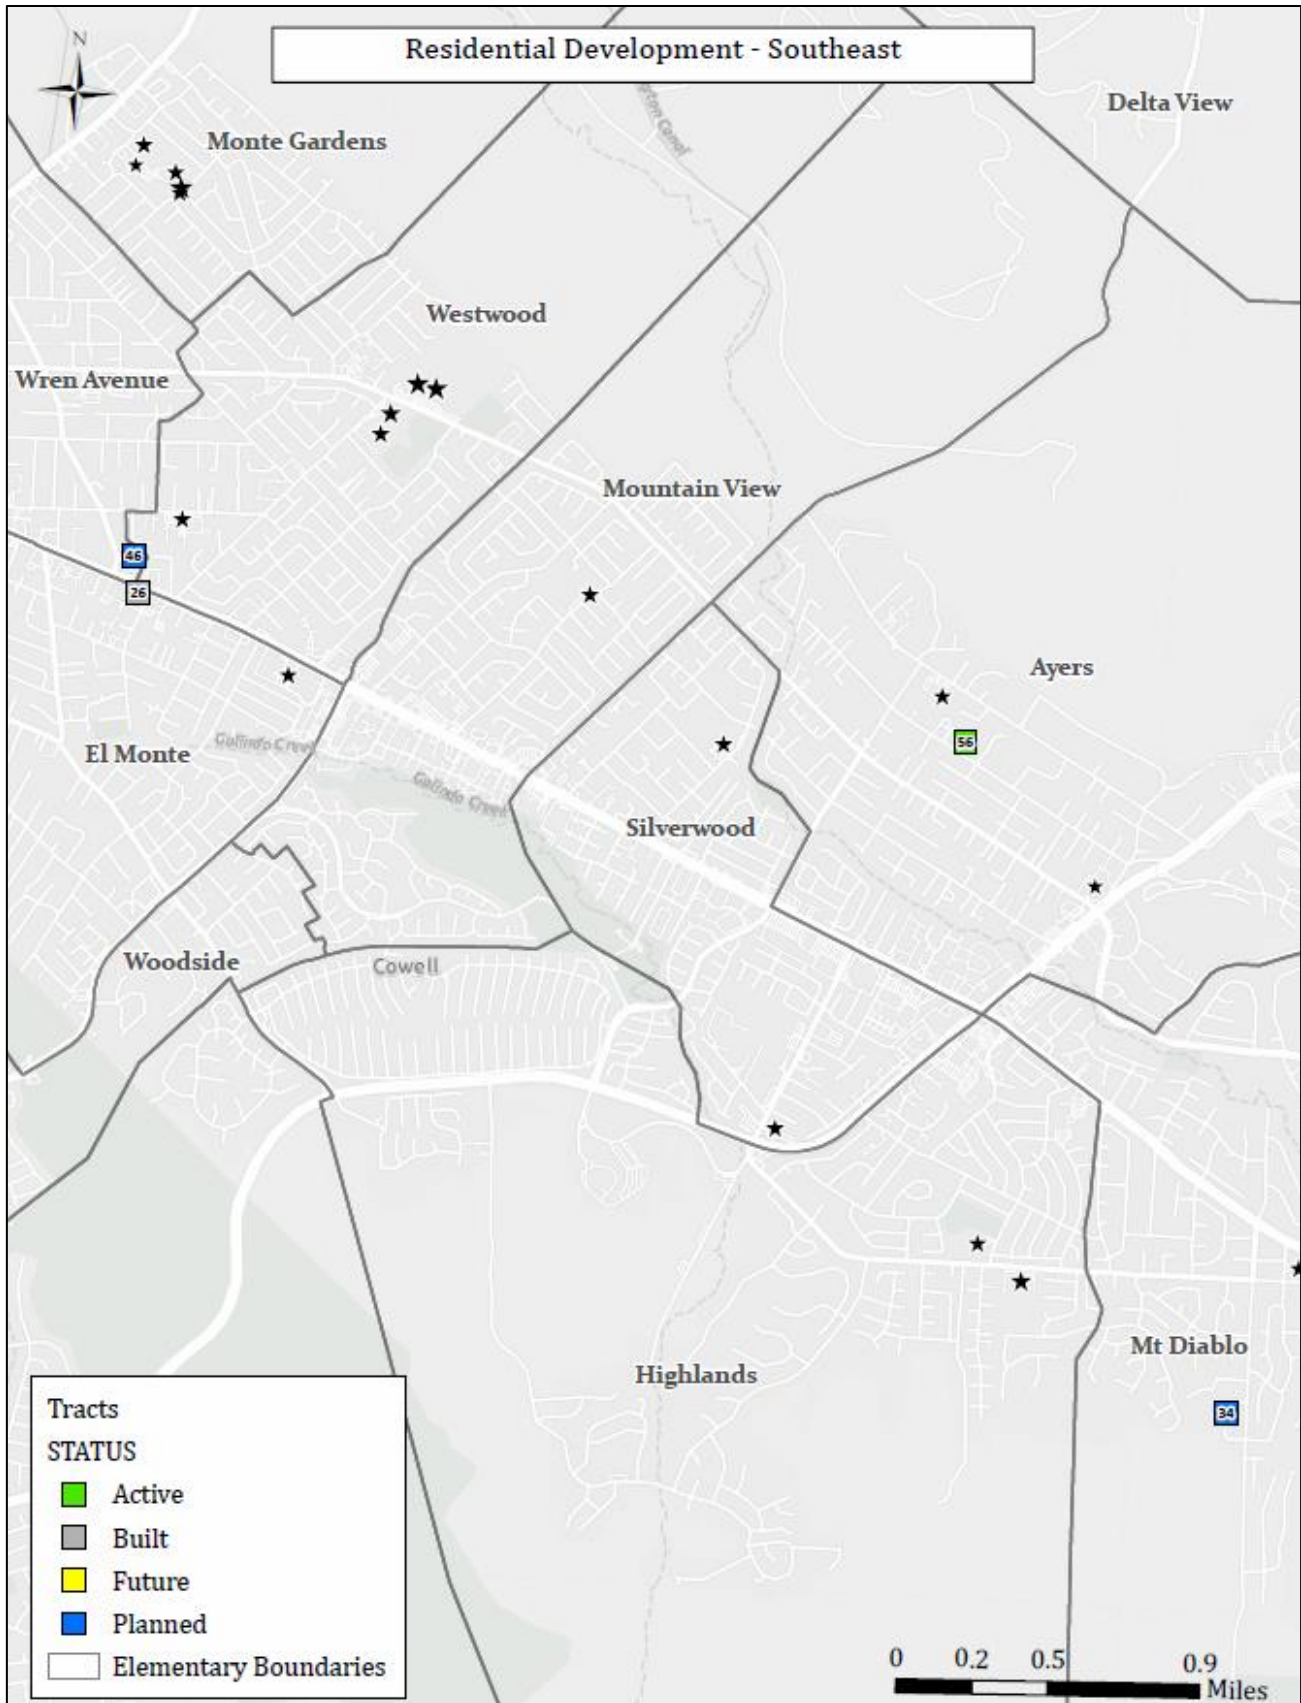

# Demographic Study SY 21-22

# Demographic Study SY 21-22

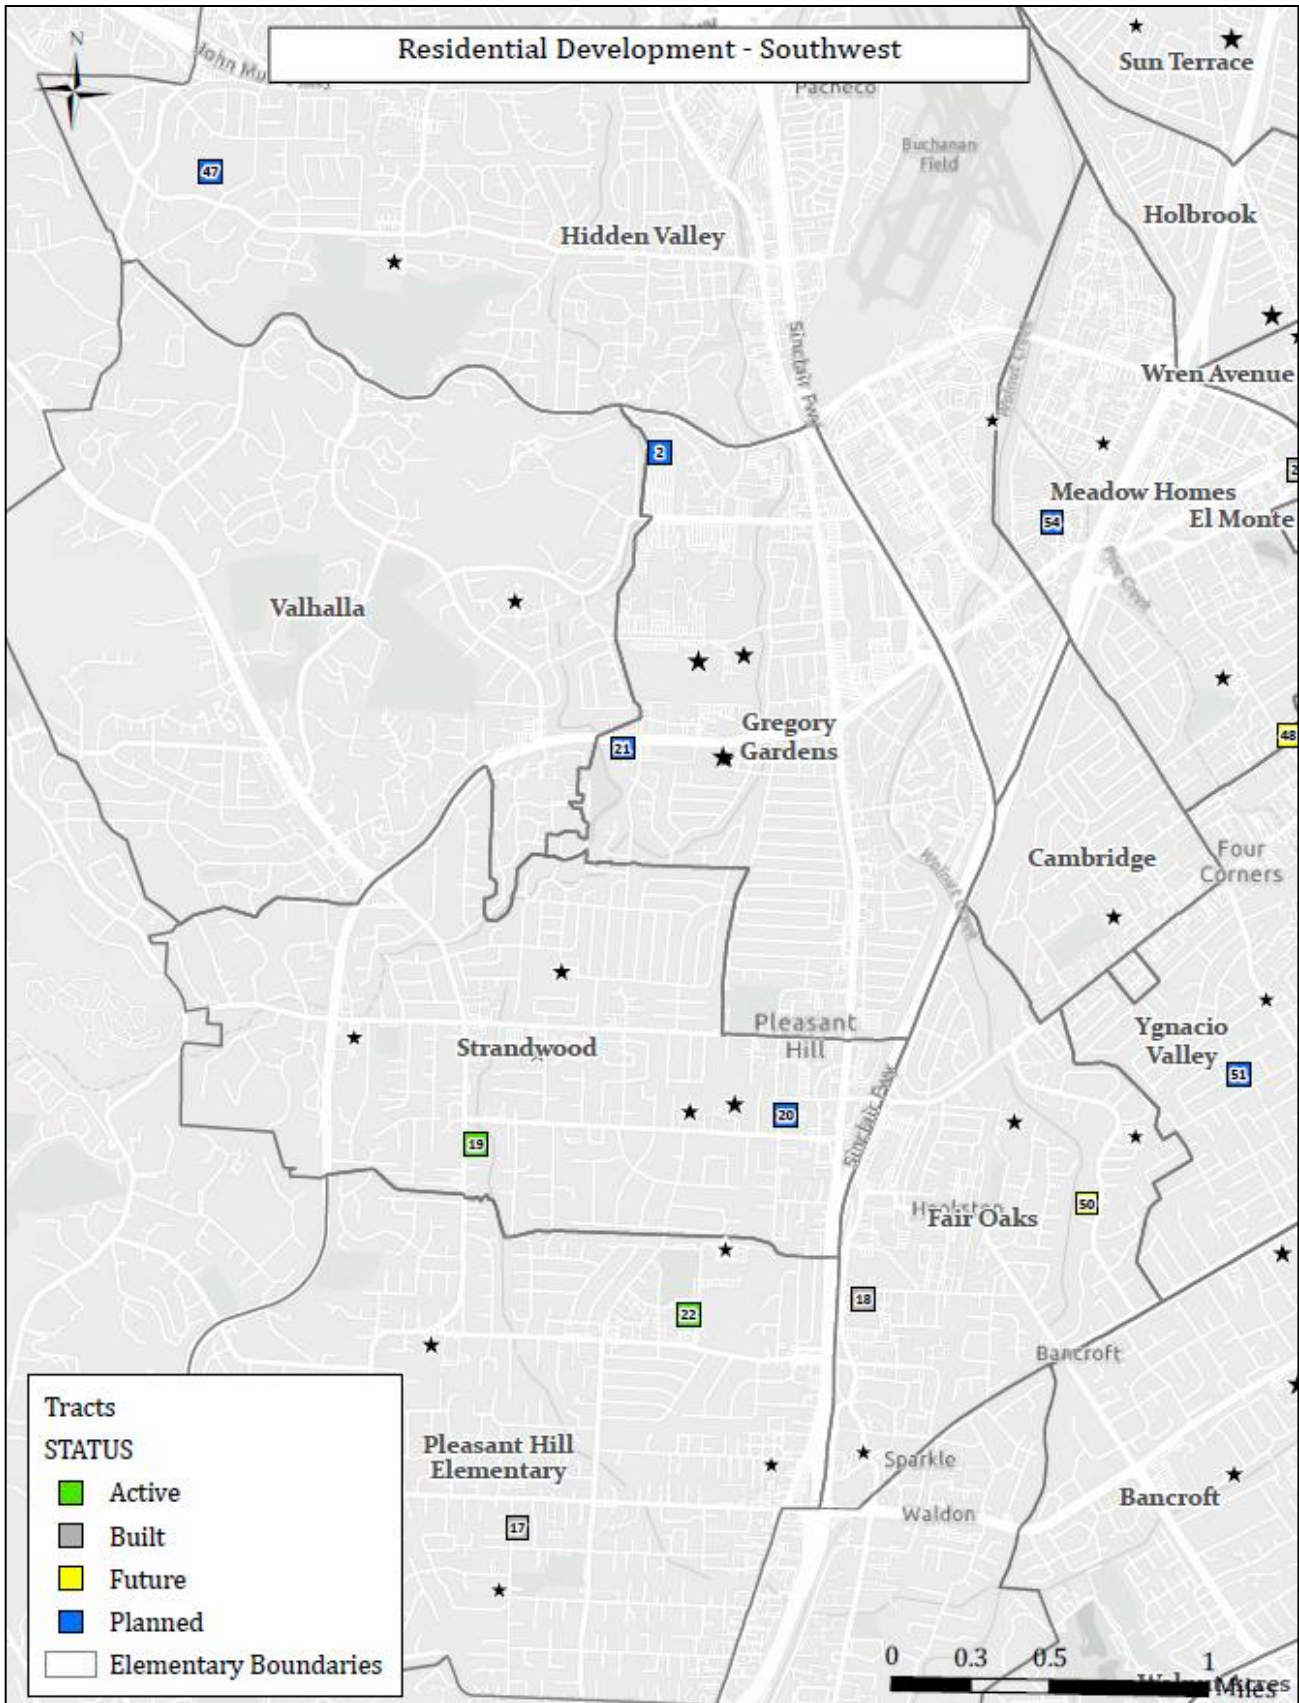

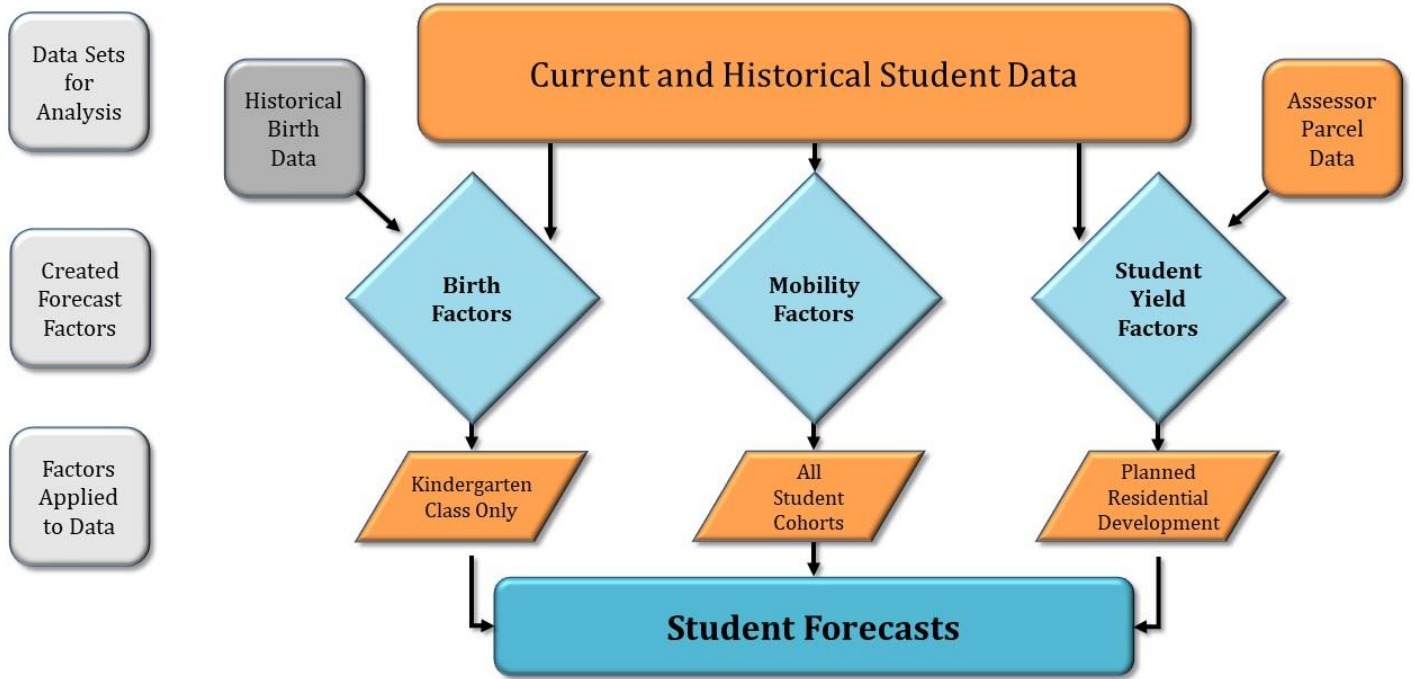

Chart 1: Projections by Residence Flowchart

**SECTION TWO – ATTENDANCE MATRIX**

An attendance matrix has been included to provide a better understanding of where students reside and where they attend school. **Remember, Davis Demographics projections are based on where the students reside, not where the student is enrolled. This method allows Davis Demographics to provide the most accurate forecast of where shifts in student population may occur and changes to future facilities (if necessary) should be located.** Because Davis Demographics projections are based on where the students reside, the figures we use as a base for each school’s resident projection may be slightly higher or lower than the actual reported enrollment for each school. The best way to plan for future facilities is to know where the next group of students will be coming from, not necessarily which school they are currently attending.

Attendance matrices act as a “check and balance” for student accounting, illustrating where the students reside (in what School of Residence) based upon their geocoded address and which school they attend (School of Attendance) based upon District provided student data. It is essential to show how the students used in the projections match up to the District’s records of enrollment for each school. Furthermore, intra-district transferring patterns can be determined by comparing School of Residence data to the School of Attendance data. The student counts used in the matrix represent MDUSD’s enrollment as of Fall 2021.

**READING THE MATRIX**

The Attendance Matrix lists the school and its SY2021/22 fall enrollment in the first row. The remaining column headers are the names of schools where the students are enrolled. For example, in the first row of the Elementary Attendance Matrix, it shows that Ayers ES has a permanent capacity of 602 students, there are also 344 students living in Ayers ES attendance area, of those 287 live and reside Ayers ES. The cells with bold numbers indicate the number of students who are enrolled at their assigned school based on their address. The matrix shows that 3 students transfer out of Ayers ES to attend Bancroft ES, 1 student transfers into Delta View ES, 2 students transfer to El Monte ES, and so forth.

For Ayers ES, there are 7 students attending from outside the district boundaries, zero unmatched, and 14 that are in TK, which you see in the rows beneath the matrices.

### **SECTION THREE – DISTRICT-WIDE STUDENT POPULATION PROJECTIONS**

The student population is projected out ten years for each of the study areas, attendance areas and for the entire Mt. Diablo Unified School District (MDUSD). The district-wide summary enables the District to see a broad overview of future population shifts and what affect these shifts may have on existing and future facilities. Each attendance area is summarized to give a local view of population changes and identify variances within the district.

Together, these projection summaries present the means for identifying the timing of future population shifts and overall facility adjustments needed to accommodate these shifts. Study areas and their projected resident students can be shifted between schools to assist in balancing enrollment through boundary changes, grade-level reassignments, or other means identified to better utilize school facilities. Projections provided in this report are based on students who live in the district fall 2021. MDUSD should continue to update development information and student forecasting annually to help track trends within the district student population.

#### **District-Wide Student Projection Trends**

The basic units in the projections are the individual study areas. There is currently a total of 722 study areas in the Mt. Diablo Unified School District. The current attendance areas are made up of specific study areas. The entire District Summary is simply the compilation of all of study areas. For each study area, the student counts are projected over ten years (Current: SY2021-22; Projected: SY2022-23 through SY2031-32). The district-wide TK-12 projections can be found on page 36 and a chart depicting the District's current enrollment and its next projected ten years is on page 37.

Currently, MDUSD has a total of 33 elementary, 13 middle, and 10 high site programs and comprehensive school sites. In October 2021, the District reported a total enrollment of 13,530 K-5 students, 6,569 6-8 students, and 7,956 9-12 students, a total of 28,404 TK-12 students enrolled in Mt. Diablo Unified School District. According to the projections, the District is expected to decrease slightly next year and every year subsequently with the only exception being fall 2025.

The district could see a steady elementary population over the next several years but a natural decrease in student counts is expected in later years due to larger class sizes matriculating into middle school (starting year 2022 to 2025). This will bring the overall elementary population to approximately 14,075 to 14,300 students in years 2024 and 2025. The projected population is reliant on a static birth rate in the area.

Middle school population has been considerably decreasing pre-COVID. There is a projected decrease next year based on students returning to school for fall 2021. This student population had several large classes that are matriculating into high school being replaced by smaller classes from elementary. The natural transition will cause a decline in the student population but offset in years 3 to 5 as the aforementioned bubble transitions out of elementary to middle. The middle school population could reach 6,480 students by 2031-32.

There are five comprehensive high schools in the district with 8,006 living in the district and enrolled at one of the five sites. There are 121 out of district students in this grade configuration and 2 unmatched students. The overall high school population has been increasing slightly since 2017, except for the last two years. Once 8,100 students, the district could expect 6,400 high school students attending school in 2031. The high school student population is projected to stabilize and maintain through year ten of the projections. There are many factors that could change projections. One key factor will be housing and what future projects will impact the community. MDUSD has contract with Davis to maintain this data for three years to help keep ahead of any future trends and foreseeable shifts.

### Universal TK Forecast Explanation

#### TK Birth Calculation:

The Universal TK Forecasts accounts for the state of California's recent AB130 universal TK-implementation. The universal TK forecast for Fall 2022 - Fall 2024 were based on the TK Birth rates that were calculated. Davis assumes that the Fall 2021 TK class was born 4 years prior in 2017. Births in 2017 were compared to 2018 births to identify a % change in births which helps forecast the fall 2022 TK births. The comparison was also made between births in 2019-2020 to help come up with an incoming TK forecast for Fall 2022 – Fall 2024. (2018 births were compared to 2017 births, 2019 births were compared to 2017 births ect.) The % Change column on each table provides an indication on whether there will be growth or decline with incoming TK students four years after these are born.

#### TK Forecast Calculation with Universal TK Integration:

1. The total number of Fall 2021 TK students living within the district boundary and each of the zip code boundaries were identified.
2. These Fall 2021 grade TK student totals were used as the base for which the birth rate (% change) was applied to help forecast incoming TK within each zip code boundary.
3. Universal TK as a result of AB 130 will officially come into effect in Fall 2022. Two months of eligibility for grade TK will be phased in each year from 2022 -2024 and an additional three months in 2025 until all four year olds are eligible for the grade TK program.
4. In order to include the two and three month universal TK integration, the average of TK enrollment over the previous four years (2017-2020) was calculated for each zip code. A three month and two month average was then derived from this calculation.
5. These two month averages were then added accordingly to the forecasted TK enrollment from Fall 2022 through Fall 2024. The three month average was added to Fall 2025.
6. Please take a look at the green column in each zip code table for the TK forecasts by zip code within the district boundary **(within appendix A)**.
7. District-wide TK forecasts are listed following each individual forecast listing **(within appendix A)**.
8. An adjusted universal TK birthrate was applied to the existing TK population within each of the elementary attendance areas to come up with TK forecasts by elementary attendance areas.

Chart 2: Current and Forecasted Trends SY2022-SY2031

Blue lines are forecasted resident figures for the next ten years.

Chart 3: Net Change in Enrollment by Grade – Five and Ten Years

**SECTION FOUR – ATTENDANCE AREA PROJECTIONS BY RESIDENCE**

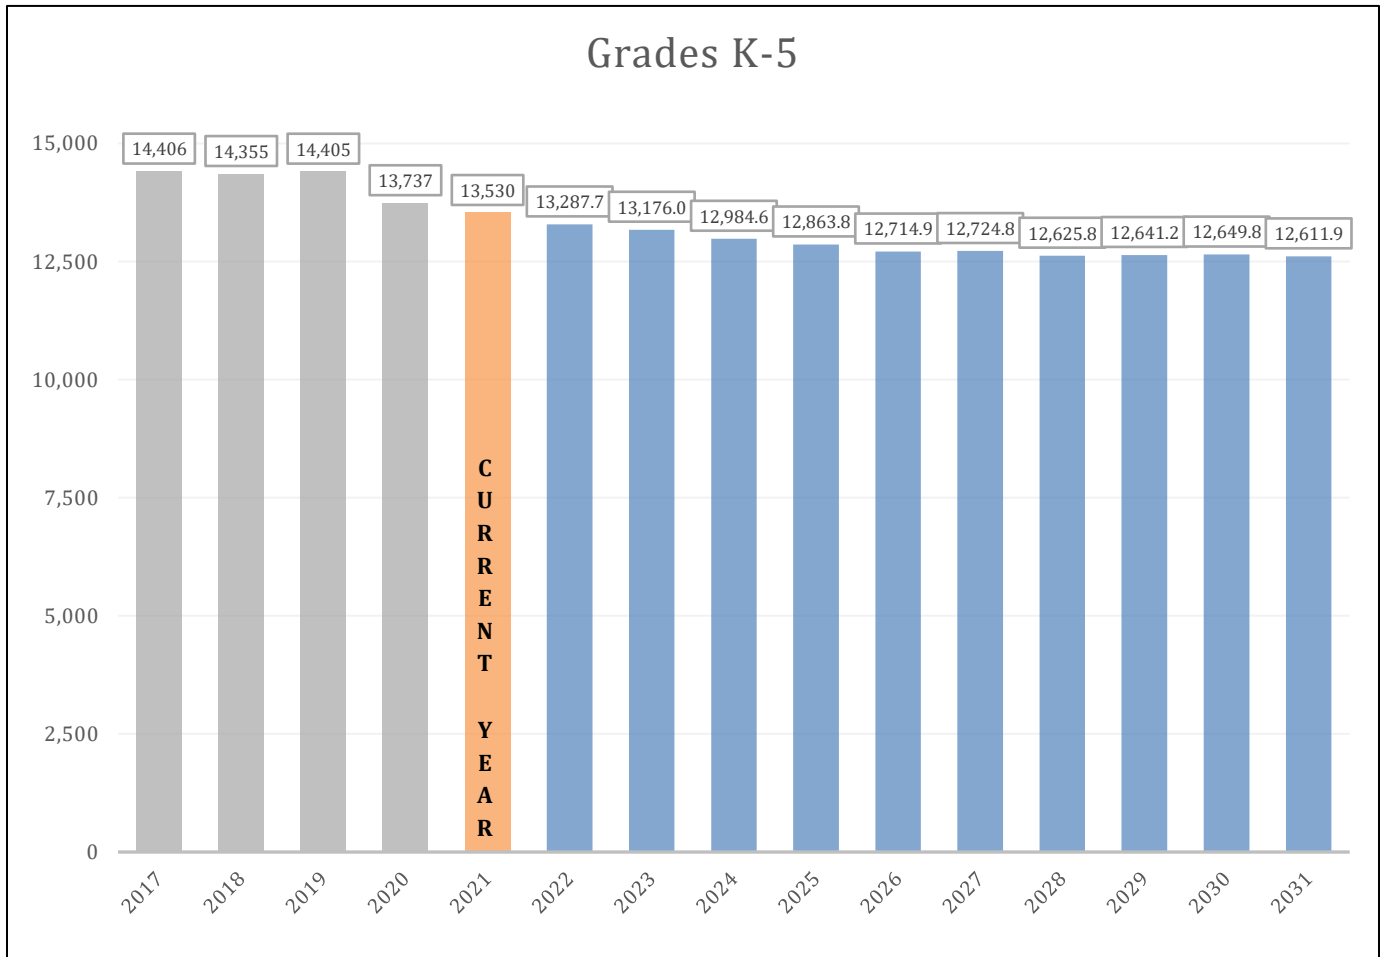

**Elementary Attendance Area (K-5) Student Population Projection Trends**

MDUSD elementary schools are projected to decrease next year. The district could see a steady elementary population over the next several years but a natural decrease in student counts is expected in later years due to larger class sizes matriculating into middle school (years 2028 to 2031). This will bring the overall elementary population to approximately 12,600 to 12,650 students. The projected population is reliant on a static birth rate in the area.

There are nineteen attendance areas that are projected to experience decline within five and ten years. The largest decrease can be found in the Shore Acres zone with projected decline over 140 students in the next five years followed closely by Sun Terrace with 130 student decline. Both sites have 52.9% and 43.3% enrollment based on capacity, respectively. Current development research does not indicate new housing impacts for these zones.

Over a third of the elementary zones are expected to experience an increase in student population. The Net Change Chart on the following page shows that three elementary zones are projected to see a significant increase. Monte Gardens, Mt. Diablo, Walnut Acres, and Ygnacio Valley zones are projected to have a combined gain of over 400 elementary students in ten years. The four campuses are currently housing between 56% and 85% of the school capacity (average 69%). These sites could be at or over that level by 2030. The district should consider evaluating programs to help balance out enrollment in future years if these trends continue.

**Map 3: Projected Changes in Resident ES Student Student SY2022-23 – SY2031-32**

The study areas within the color range are the planning areas that make up the titled attendance zone. Orange/red areas indicate forecasted student growth, and the light green/green areas represent areas in decline. The gray zones represent “No Change” and frequently have little to no population.

**Middle School Attendance Area (6-8) Student Population Projection Trends**

Impacts on the Mt. Diablo Middle Schools student population has been decreasing pre-COVID pandemic. This student population had several large classes that were matriculating into high school being replaced by smaller classes from elementary. This natural transition will cause a decline in the student population but offset in year 5 of the projection as the bubble transitioning out of elementary to middle is anticipated. The middle school population could reach 5,600 students by 2031. Diablo View MS zone is projected to have an increase of 70 students over ten years. The existing site appears to have capacity for the forecasted increase. Opposite to Diablo View MS is Riverview MS. RMS zone has an estimated deficit of almost 350 students in the next ten years. The elementary population coming from the areas that make up RMS are projected to lead to the decline in the future middle school population. District staff should consider that of the 1,067 students living in the zone about 140 are enrolled at Sequoia Middle School. The RMS site only enrolled 716 students this fall: a little over 49.5% capacity.

**Chart 6: Current and Projected Enrollment MS Students**

IMPACTS ON THE MT. DIABLO MIDDLE SCHOOLS

Chart 7: Net Change in Enrollment Five and Ten Years

Map 4: Projected Changes in Resident 6-8 Grade Student SY2022-23 – SY2031-32

The study areas within the color range are the planning areas that make up the titled attendance zone. Orange/red areas indicate forecasted student growth, and the light green/green areas represent areas in decline. The gray zones represent “No Change” and frequently have little to no population.

**High School Attendance Area (9-12) Student Population Projection Trends**

Mt. Diablo has five high school attendance zones representing 67% of the district area with a non-assigned zone with 9-12 students who may attend one of the five campuses (CVCHS Non-Assigned). Davis has provided data of the resident students who live in the Non-Assigned areas based on student enrollment from the CBEDs snapshot. The overall high school student enrollment has been decreasing annually the last several years from 8,074 students in fall 2017 to 7,956 students this fall. Attributing to the decline from year to year was the graduation of a very large senior class in 2017 (over 2,100 students). However, the resident high school students did not decline between 2018 and 2019 contrary to the other district grade configurations. There was a significant increase of over 100 students. CVCHS is the only one high school zones projected to increase in student counts. CVCHS projected growth can be anticipated later into the forecasts, this area is expected to experience overall decline after peaking in 2024. The four other high school zones are all projected to decrease in resident population. This may be a blessing for some sites as it appears that they are at site capacity or close to it in some cases. The district should note that Concord High enrollment capacity this fall was 52.4%. Currently, the five comprehensive high schools have approximately 10,908 seats based on the data provided for this study. The average site capacity for all HS attendance areas is at 69.6%

Map 5: Projected Changes in Resident HS Student SY2022-23 – SY2031-32

The study areas within the color range are the planning areas that make up the titled attendance zone. Orange/red areas indicate forecasted student growth, and the light green/green areas represent areas in decline. The gray zones represent “No Change” and frequently have little to no population.

### APPENDIX B: DEMOGRAPHIC AND INCOME PROFILE PROVIDED BY CENSUS

Data provided on the following pages is based on geographically related information of Mt. Diablo Unified School District based on a third-party source using Esri analytics in combination with Census information and American Community Survey. This information is provided by Davis Demographics as supplemental information about the district. Davis did not research nor guarantees accuracy of the Census data.

Demographic And Income Profile Provided By Census.

#### **Methodology Statement**

- **Demographic and Income Profile / Community Profile:** Esri forecasts for 2020 and 2025. Esri Updated Demographics are point estimates representing July 1 of the current and forecast years. The following table summarizes the updated demographic variables. Also included are select averages, medians, aggregates, and per capita values.
- **American Community Survey (ACS) Housing Summary:** Esri provides reports, data enrichment, and thematic mapping for ACS estimates in standard geographies, current ZIP codes, and user-defined polygons. Reports include two summary profiles, Population and Housing. Esri's reports/maps are designed to simplify the data and enhance its usability with reliability thresholds. ACS data provides much of the information previously available through the decennial census. ACS uses a continuous measurement or "rolling" sample, in which a small percent of the population is sampled every month. The ACS is updated and released more frequently than the decennial census—every year instead of every ten years. Smaller sample sizes and variable collection times have introduced a margin of error into their estimates.
- **Tapestry Segmentation:** provides an accurate, detailed description of America's neighborhoods—U.S. residential areas are divided into 67 distinctive segments based on their socioeconomic and demographic composition—then further classifies the segments into LifeMode and Urbanization Groups. Each year, population and household count by Tapestry segment are updated. While most geographic areas retain their original Tapestry Segment assignment, select areas may be assigned a new market segment when research uncovers new or significant local growth. The entire Tapestry Segmentation system is refreshed every three to five years, resulting in a more comprehensive reassignment in rapidly changing neighborhoods. Tapestry is a geodemographic segmentation system that integrates consumer traits with residential characteristics to identify markets and classify US neighborhoods. Neighborhoods with the most similar characteristics are grouped together, while neighborhoods with divergent characteristics are separated. Internally homogenous, externally heterogeneous market segments depict consumers' lifestyles and lifestages. Tapestry Segmentation combines the "who" of lifestyle demography with the "where" of local geography to create a classification model with 67 distinct, behavioral market segments.
  - MDUSD Largest Tapestry segment is [Pleasantville](#). (18.1%) followed by [City Lights](#) (12.6%) and [Exurbanites](#) (7.3%). Prosperous domesticity best describes the settled denizens of **Pleasantville**. Situated principally in older housing in suburban areas in the Northeast (especially in New York and New Jersey) and secondarily in the West (especially in California), these slightly older couples move less than any other market. Many couples have already transitioned to empty nesters; many are still home to adult children. Families own older, single-family homes and maintain their standard of living with dual incomes. These consumers have higher incomes and home values and much higher net worth.

**Data Note:** N/A means not available.

**2015-2019 ACS Estimate:** The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2015-2019 ACS estimates, five-year period data collected monthly from January 1, 2015 through December 31, 2019. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

**Margin of error (MOE):** The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

**Reliability:** These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
- Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow-use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.

**Data Note:** This report identifies neighborhood segments in the area, and describes the socioeconomic quality of the immediate neighborhood. The index is a comparison of the percent of households or Total Population 18+ in the area, by Tapestry segment, to the percent of households or Total Population 18+ in the United States, by segment. An index of 100 is the US average.
